

CASE STUDY RETAIL

The Pines Elanora Elanora, Queensland

FireM was engaged by Wormald Australia to install the FireM solution in The Pines Elanora Retail Precinct to reduce on-site response time and provide transparency on the Fire Safety system operations on-site.

Access to the FireM data was provided to Facility Management and the on-site security/response team upon the successful commissioning of the system.

Almost immediately, Facility Management was advised of **23 active isolations** they weren't already aware of. These device isolations were present in over 10% of their overall Fire Safety System **which posed a significant operational risk in the event of a fire.**

PROJECT OUTCOMES

- Immediate identification of **unknown device isolations.**
- **Transparency** on the operation of the Fire Safety System.
- **Reduced on-site response time** by providing users access to real-time information relating to the status of the Fire Indicator Panel
- **Increased operational compliance and contractor accountability** by providing Facility Management with access to the FireM Dashboard illustrating tested devices.
