About Advanced Technology Products

With extensive experience in hazardous and non-hazardous environments, we pride ourselves on designing, engineering and integrating life and asset safety systems with a focus on fire detection and suppression, RFID solutions and associated warning systems.

ATP are certified to ISO9001 and are members of the Institute of Fire Engineers of Australia and National Fire Industry Association.

Our expertise incorporates:

- System Design and Engineering
- Procurement and Supply
- Product Assembly and Fabrication
- Project Management
- Client Documentation
- FAT/SIT/SAT Services
- Commissioning and handover (onshore and offshore)
- Technical support and product training
- Capital Cost Estimates

ATP serves the Oil & Gas, Mining, Resources, Defence, Power, Marine and Construction industries. With our head office in Perth and representation in Melbourne and Brisbane, we have the ability to mobilise both nationally and internationally.

Detect

When you work in a hazardous area, you need to detect a fire or gas threat early, before it becomes a disaster.

ATP can analyse your site's unique setup, then hand-select a project team to develop your advanced detection solution.

Suppress

ATP can design a built-to-purpose fire and gas suppression system that quells a threat's potential to combust, saving lives and assets from harm.

To fully capitalise on early detection, it's best to design it in conjunction with an early detection system.

Track

In the event of an emergency, advanced RFID tracking technology takes staff and asset management to all new levels.

From pinpointing the safest evacuation route and mustering location, to tracking the location of missing employees, ATP puts you in control.

Scope of capabilities

Manufacture

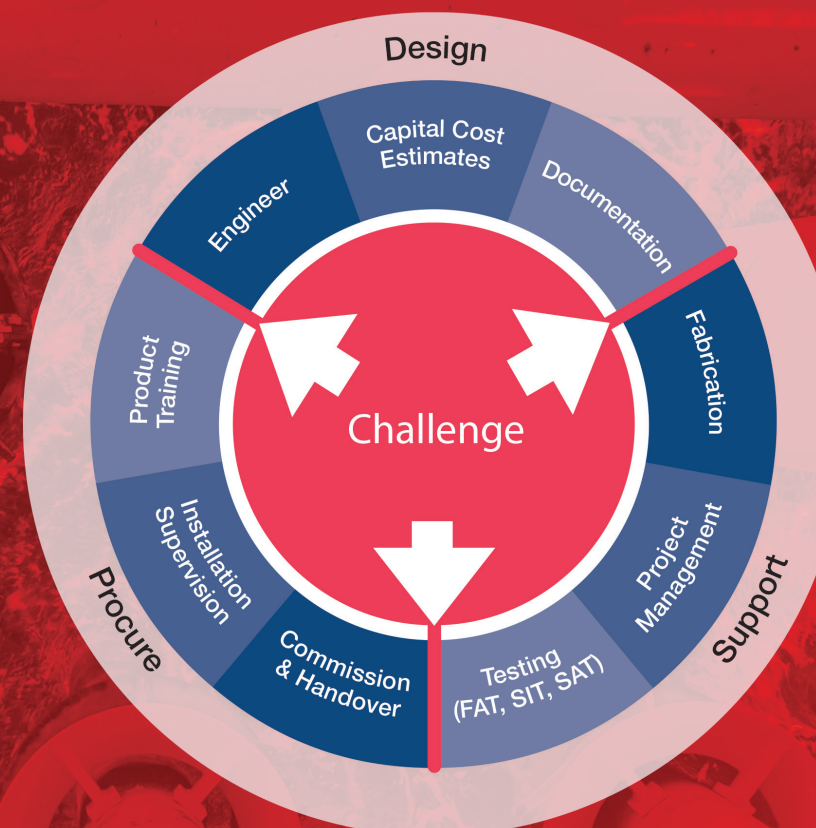

- Design
- Engineer
- Procure
- Test
- Commission

Installation

ATP's Integrated Solutions approach is at the centre of its single-source delivery model. We combine field-proven, state of the art equipment with our wide ranging detection and protection expertise to maximise the client's return on investment. We work with you to determine your specific objectives, reduce operating costs, increase throughput and establish a carefully selected project team to achieve the final goal.

How we deliver solutions

ATP delivers outcomes as both integrated solutions and defined, single area projects.

Our integrated solutions cover the Design, Engineering, Procurement, Testing and Commissioning for each project.

In addition, we can deliver standalone outcomes from each of these categories to cater to your project.

We also work with contractors when specialist expertise is required.

Some of our projects

Gorgon LNG Project

Fire & Gas Detection & Suppression Systems for the complete Camp, Operations & TCF including Ex Telephone Systems, Junction Boxes, Security System CCTV & Access Control Interfaces including design, assembly, documentation, FAT, SIT & SAT, and Onyx Graphics packages.

Stage 2:

Design and supply of 134 fully networked Fire Alarm Panels, including the integration of twin graphics packages and over 7,000 field devices documentation, FAT, SIT & SAT.

Wheatstone LNG

Fire systems configuration, programming and site support, kitchen Hood Suppression System including design, documentation & SAT.

Explosion proof WIFI enclosure including engineering, documentation, assembly and FAT.

Ichthys LNG

Ichthys RFID PLS Project - WLAN design and supply of RFID (Radio Frequency Identification) solutions including over 136 EX enclosures and Access Points, Temporary CCTV and siren system solution.

Our history
